

These are official statistics from the European Medicines Agency
 Doctors estimate that just 10% of vaccine adverse events
 (side-effects) and deaths are reported.

Statistically your child has more chance of being hit by lightning
 (than dying from Covid-19)

-Why risk your child's health and possibly life giving them an experimental injection which is unapproved, under emergency licence only, and still in clinical trials until 2023?

-Healthy people do not spread disease. To suggest that our children are a health threat to their families and teachers is a cruel deception. (Ref.1)

-It is irrational to believe that the whole world has to be vaccinated against a disease with no, or mild symptoms in the vast majority of those who contract it, and which has a 99.8% recovery rate.

-There are good reasons to have concern that these injections will cause real harm, not only now, but in years to come. They give your cells a "recipe" to make the spike protein of the virus, *the part of the virus which causes the symptoms and harms of the disease*. This cannot be removed or reversed. (Refs 2 and 3)

-Did you know that the pharmaceutical companies who make these injections are legally exempt from liability for any injury or harm? You cannot sue them if your child is injured or killed.

It is claimed these jabs give a risk reduction of 95%, but this is a mathematical trick. Absolute risk reduction is less than 1%". (Ref 4)

We adults have a duty to protect children.

STAY SAFE. KEEP YOUR FAMILY SAFE.
